Experience

Full-Stack Software Developer (R&D)

Cambrian College – Research & Development

Dec 2024 – Present

Sudbury, Ontario, Canada

- Designed and shipped **Rokion** telemetry ingestion and analytics pipelines processing **90k+ records/day per vehicle** across 100+ features; achieved **sub-300ms query latency** on ClickHouse to power downstream APIs, dashboards, and ML.
- Designed and shipped **Grantagg**, a **multi-tenant CRM** (Node.js/TypeScript, React, Flutter, Postgres) with workflow-driven RBAC for multi-user task operations; owned end-to-end Azure delivery — CI/CD via GitHub Actions, isolated test/prod environments, API gateway, and automated backups.
- Built **Spornado**, a production ML pipeline for crop disease classification — preprocessing, feature engineering, training (logistic regression, decision trees), and real-time API inference — driving a 3-tier action policy (monitor / alert / intervene at 30/70%).
- Engineered **Noun AI**, an agent platform pairing brands with manufacturers via auto-generated product briefs; built the **MCP tool layer**, web-search/WhatsApp integrations, and operator dashboard.

Full-Stack Software Developer

The Alpha Nova

Jan 2024 – Nov 2024

Sudbury, Ontario, Canada

- Built **WheelIt**, a ride-sharing platform (Flutter mobile + FastAPI backend) with real-time driver-rider matching over WebSockets and Postgres-backed APIs covering the full ride lifecycle.
- Established multi-tier testing coverage — unit, integration, API, and E2E with **Playwright** — across multiple projects, cutting regressions and stabilizing release cycles.
- Containerized backend services with Docker and built **GitLab CI/CD** pipelines, enabling consistent builds and faster releases across environments.
- Shipped English/French **i18n localization** across mobile and web, standardizing translations across user-facing workflows and APIs.

Projects

- AgentTracer** ([GitHub](#)) — Privacy-preserving observability platform for AI agents. Captures execution flow, tool calls, and decision changes via **metadata-only tracing** — never stores prompts or responses — enabling debugging and evaluation under strict PII requirements.
- Naphaa** ([GitHub](#)) — Offline-first business platform (Flutter, FastAPI, Postgres). Mobile client runs fully on local SQLite when disconnected; sync layer reconciles with Postgres on reconnection.
- TenantGuard** ([GitHub](#)) — AI assistant for tenant rights and rental disputes. **LangChain + LangGraph** orchestrate multi-step retrieval and validation over a tenancy-law corpus; response confidence scoring flags low-confidence answers. React (TypeScript) frontend.

Awards & Recognition

- 1st place**, Google DevFest — GDG Sudbury (2024) — ML optimization tool for open-pit mining workflows.
- 2nd place**, AI Hackathon — Cambrian College (2025) — AI dashboard generating insights from CSV/Excel uploads.

Technical Skills

Languages	Python, TypeScript/JavaScript, C/C++, SQL
Backend & Data	FastAPI, Node.js, PostgreSQL, ClickHouse, MongoDB, MySQL, SQLite, ETL
Frontend & Mobile	React, Next.js, Flutter
AI / ML	LangChain, LangGraph, MCP, RAG, vector databases, scikit-learn
Cloud & DevOps	AWS (EC2, RDS, S3), Azure, Docker, GitHub Actions, GitLab CI/CD
Testing & Tools	Pytest, Jest, Playwright, Postman, Git, OpenAPI

Education

Cambrian College, Sudbury ON — Postgraduate Certificate in Mental Health (2026); Diploma in Computer Programming and IoT (2025).
